

The 7th grade math class has finished their “Weather in Nebraska” project.

The class worked on gathering the weather data for Dunning for a yearlong period from March 1, 2018 to March 1, 2019. They used the sites weatherchannel.com and weatherunderground.com. They each were assigned 3 months to track data for. The data included daily highs/lows, precipitation, and daylight hours. Then, they put the data into a spreadsheet. From the spreadsheet, they made graphs to display each month’s data. The last step was to write a report on how they created the project.
