

RADON AWARENESS & TESTING

Radon is a naturally-occurring radioactive gas that comes from the soil, rocks, and well water.

Radon is the number one cause of lung cancer among nonsmokers. Overall, radon is the second leading cause of lung cancer.

Having your home tested is the only effective way to determine whether you and your family are exposed to high levels of radon. Testing is inexpensive and easy — and it can save your life.

We now have radon testing kits! Call or stop by Loup Basin Public Health Department to find out how you can get one!
